IT'S HOPE FIRST FOR GASTRIC CANCER

Cityof ORANGE Hope

City of Hope is a National Cancer Institute-designated comprehensive cancer network delivering lifesaving treatments and conducting pioneering research. We want to raise awareness about disease prevention and early detection, with the goal of making Orange County cancer-free. We're offering individuals and organizations the opportunity to participate in upcoming risk assessment efforts to increase public awareness and achieve better outcomes for diagnosis, treatment and survival.

WHAT YOU SHOULD KNOW ABOUT THE 4TH LEADING CAUSE OF CANCER DEATH WORLDWIDE

Gastric cancer, also known as stomach cancer, begins when cells in the stomach start to grow out of control

IN THE U.S. GASTRIC CANCER IS CONSIDERED "RARE."

27,000+

people are diagnosed with gastric cancer each year

people die from gastric cancer each year

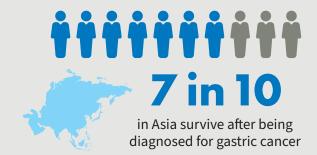

BUT LIKE OTHER CANCERS, GASTRIC CANCER DOES NOT AFFECT EVERY AMERICAN AT THE SAME RATE

ETHNIC MINORITIES ARE 2–14X MORE LIKELY TO BE DIAGNOSED WITH STOMACH CANCER

Highest incidence in Korean American men More advanced stage diagnoses in Hmong, Hispanic and black Americans Gastric cancer is more common in Californians than the general U.S. population

U.S. LAGS BEHIND ASIAN COUNTRIES IN OVERALL GASTRIC CANCER SURVIVAL

3 in 10 in the U.S. survive after being diagnosed for gastric cancer

WHY IS DIAGNOSIS SO OFTEN DELAYED?

Early-stage gastric cancer can be cured. Poor gastric cancer outcomes are largely due to late stages of diagnosis.

Early stages of stomach cancer are often missed:

80% are asymptomatic

- AND -

FEWER THAN 5%

experience anemia, weight loss and dysphagia

ADVANCED STAGE SYMPTOMS

such as fatigue, weight loss, bloating, abdominal pain, loss of appetite, nausea, difficulty swallowing and melena may go unrecognized

ALSO PROBLEMATIC

Symptoms are ignored, dismissed and/or mistreated

Barriers to healthcare including language, access

YOU MIGHT BE AT HIGH RISK IF YOU:

Are a smoker

and have a poor diet

Are an immigrant from a high-incidence region:

East Asia, Eastern Europe or South America

Have active or prior Helicobacter pylori (H. pylori) infection

Have a parent, sibling, grandparent or aunt/ uncle who developed stomach cancer

Are Korean, Japanese, Vietnamese, Chinese, Filipino, non-Hispanic Black, Hispanic or American Indian/Alaskan Native

WHAT ARE THE PREVENTIVE MEASURES?

H. pylori Screening: H. pylori is a bacteria that is associated with gastric cancer and can be detected by breath or stool test

Endoscopic screening: this procedure uses a long tube with a tiny camera to visually examine the stomach

IF YOU ARE AT HIGH-RISK

Endoscopic screening and H. pylori testing should be considered.
